FOR PRIMARY SCHOOLS

What if computing was the lesson pupils begged for?

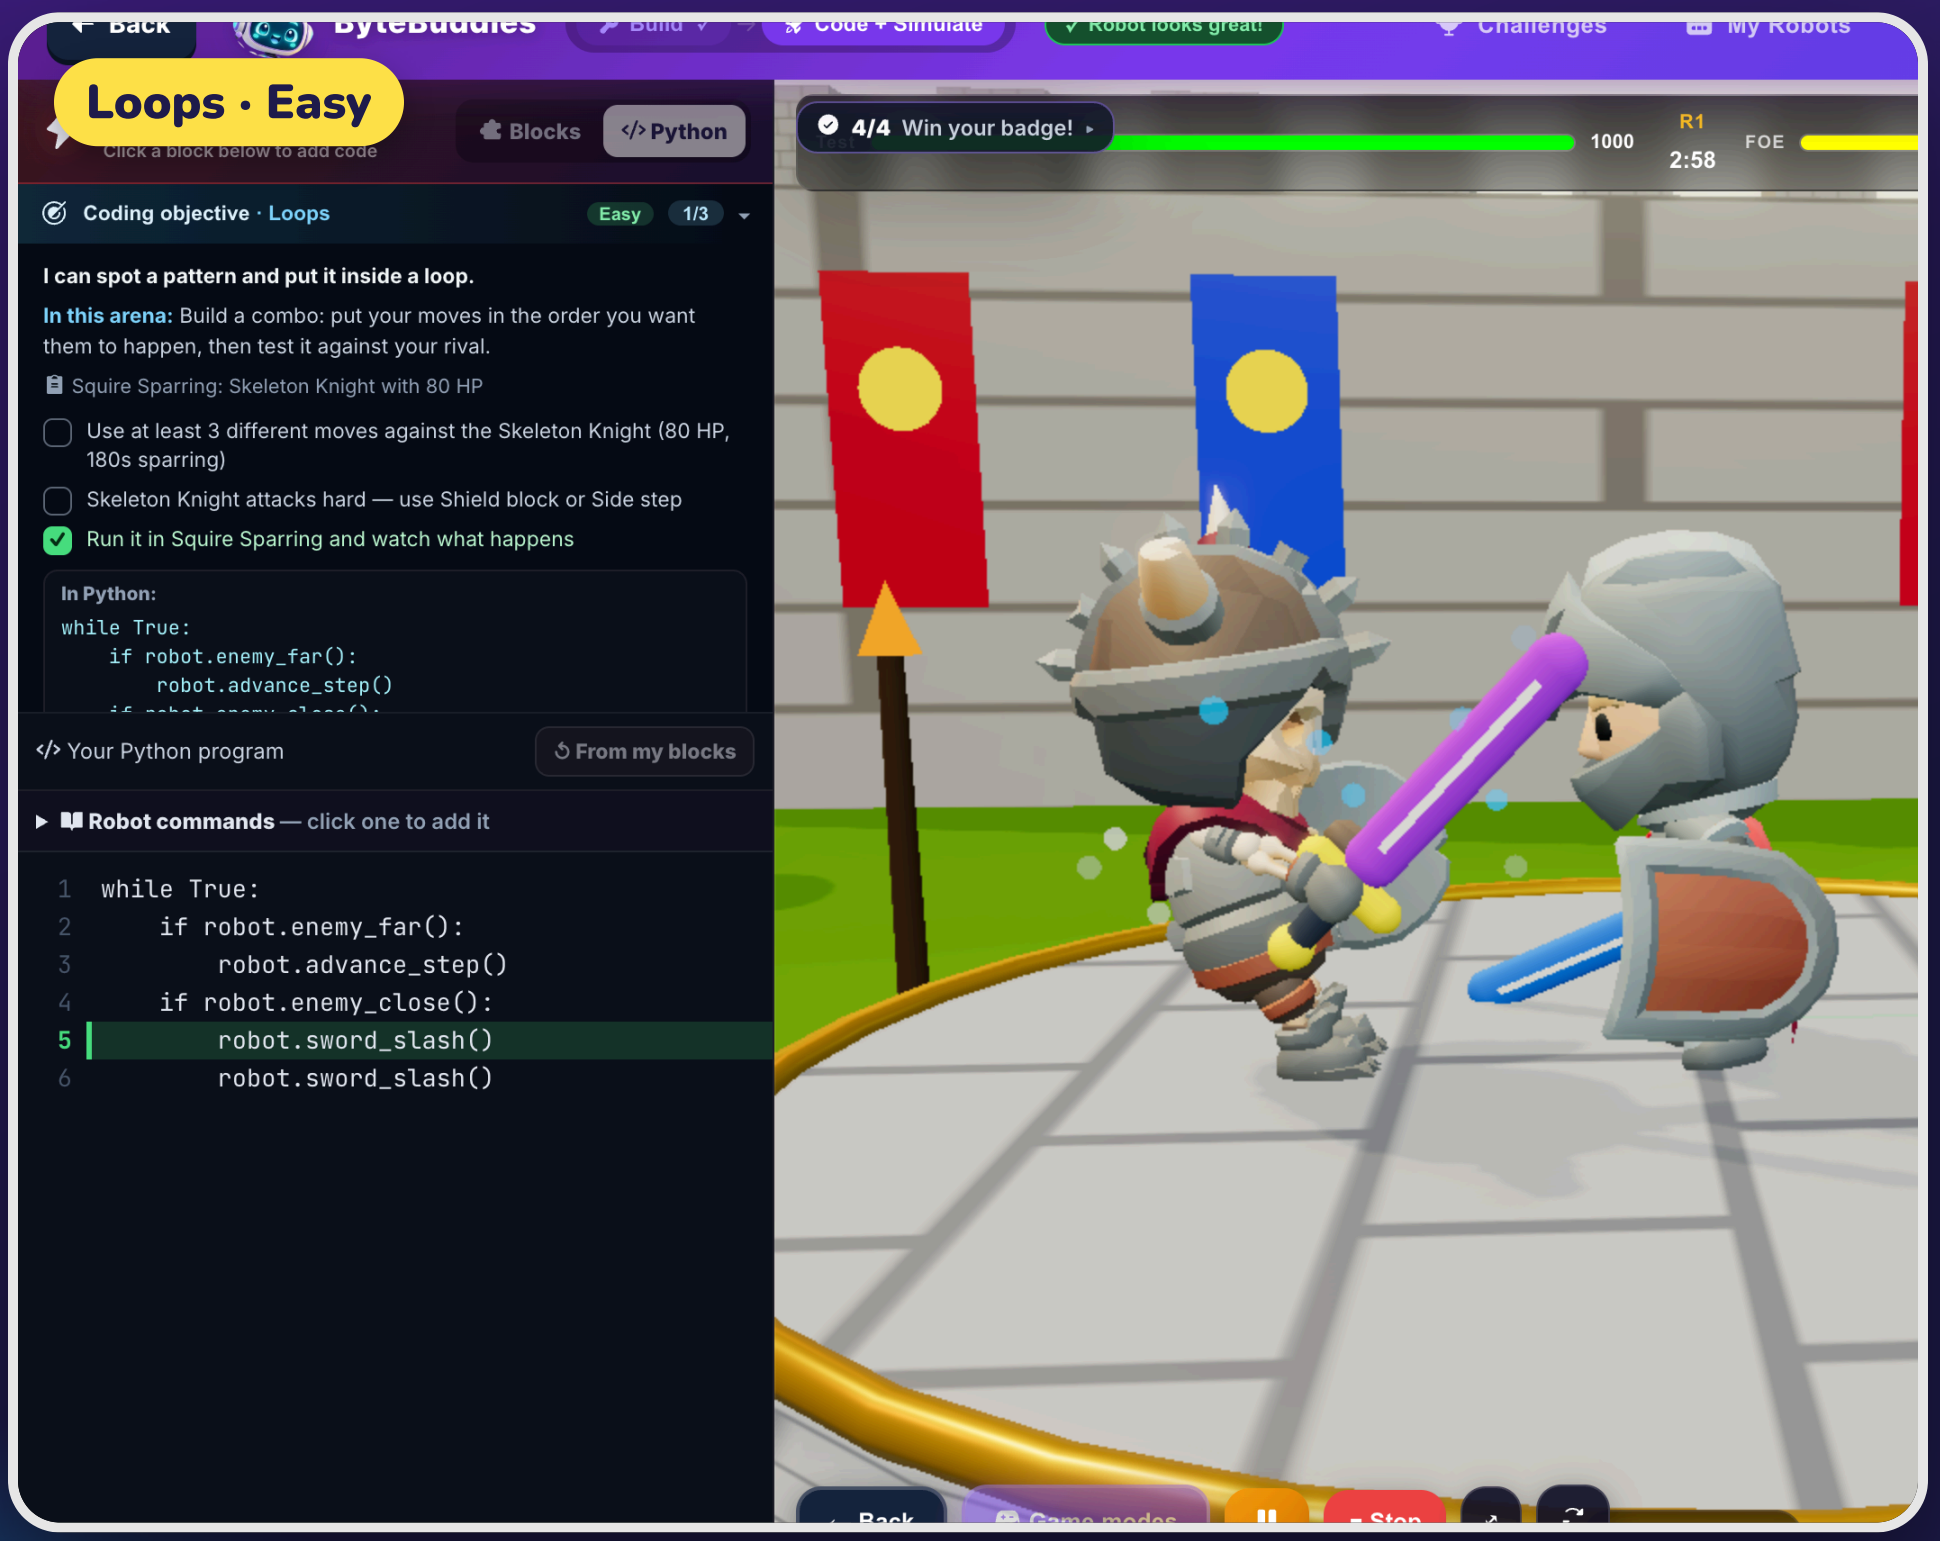

Pupils build a robot, then code it to race, fight, fly and solve missions in 3D worlds.

EVERY ACTIVITY HAS A GOAL

Real skills, not just play

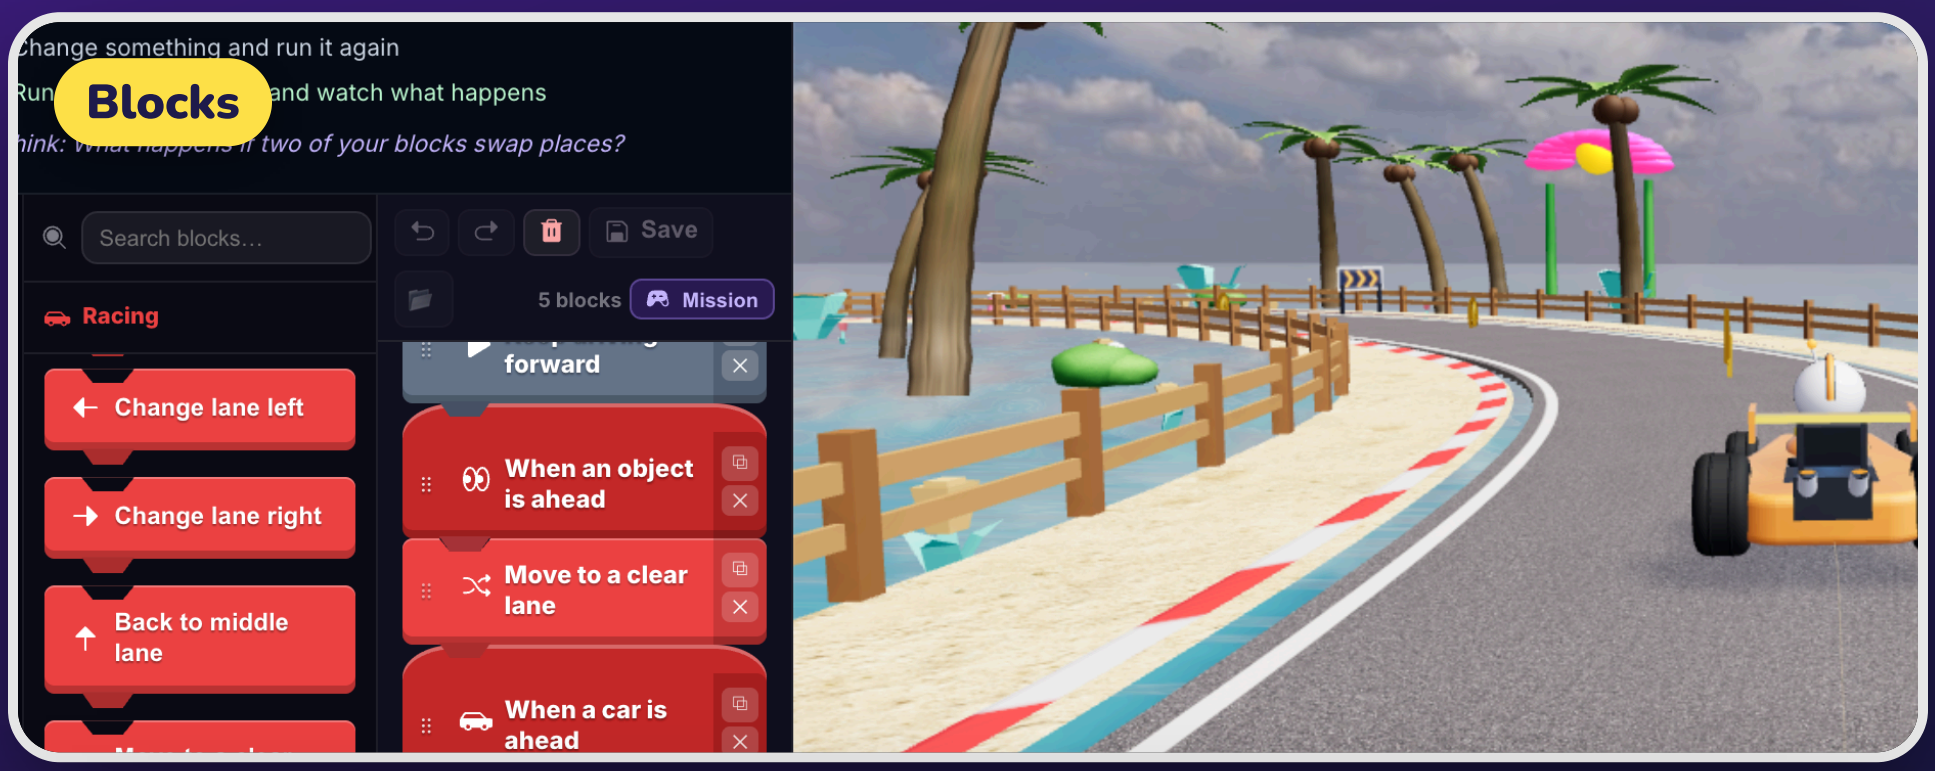

Each arena has a clear coding objective: sequencing, loops, events, sensors and debugging. It gets harder as pupils level up.

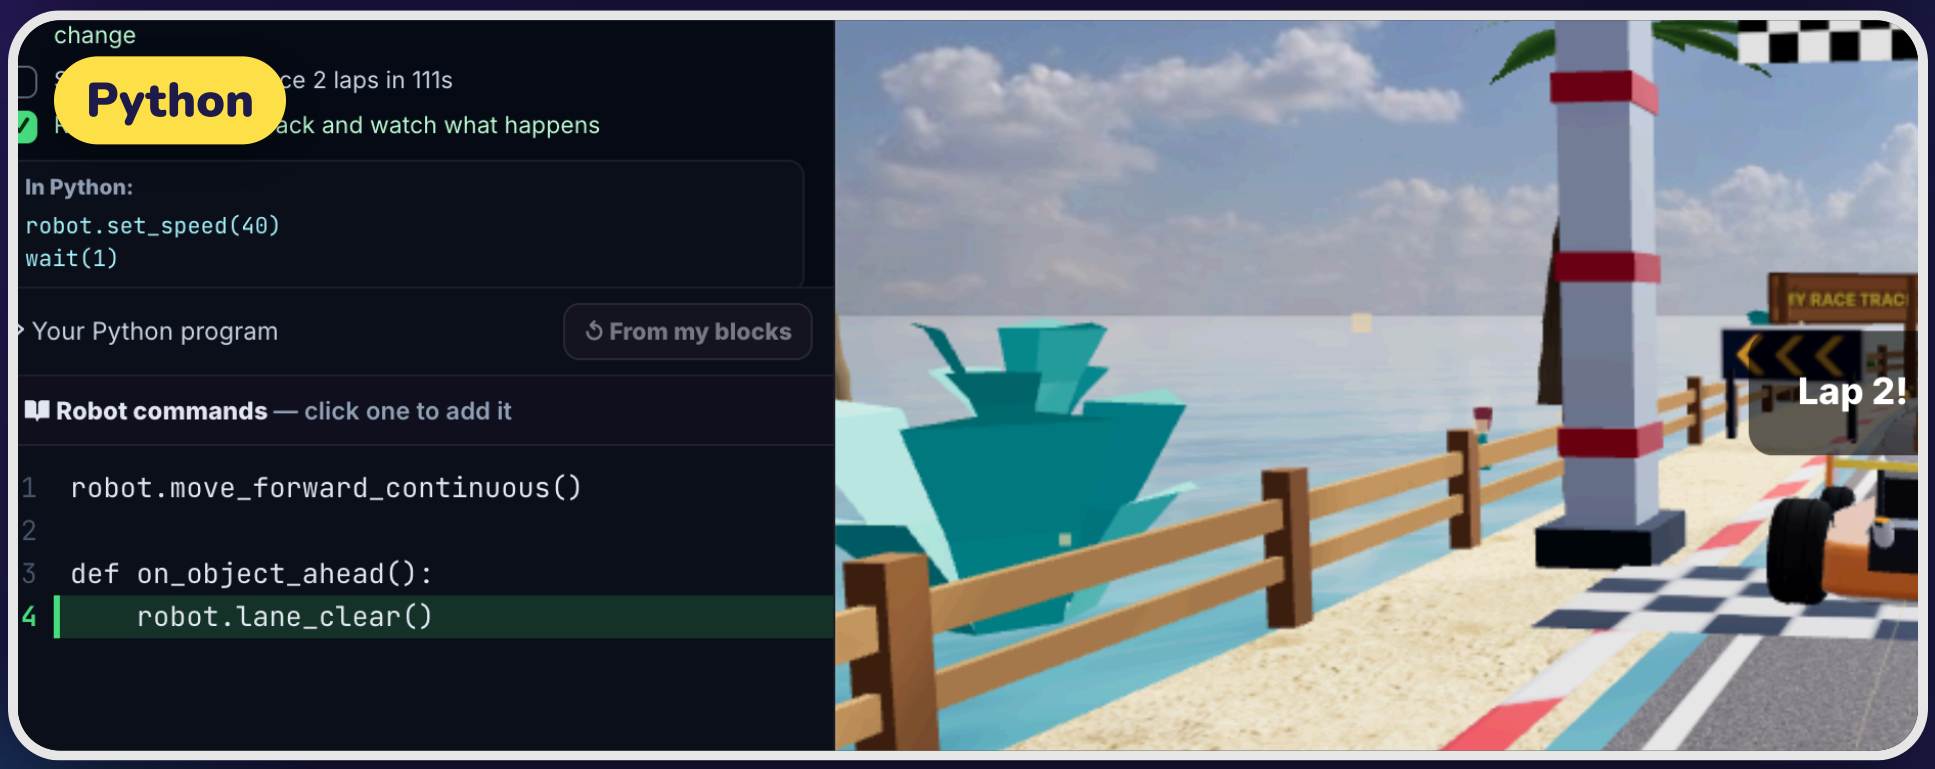

GROWS WITH EVERY PUPIL

Blocks today. Python tomorrow.

Start with drag-and-drop. Switch to real Python with one click: the same program, both ways.

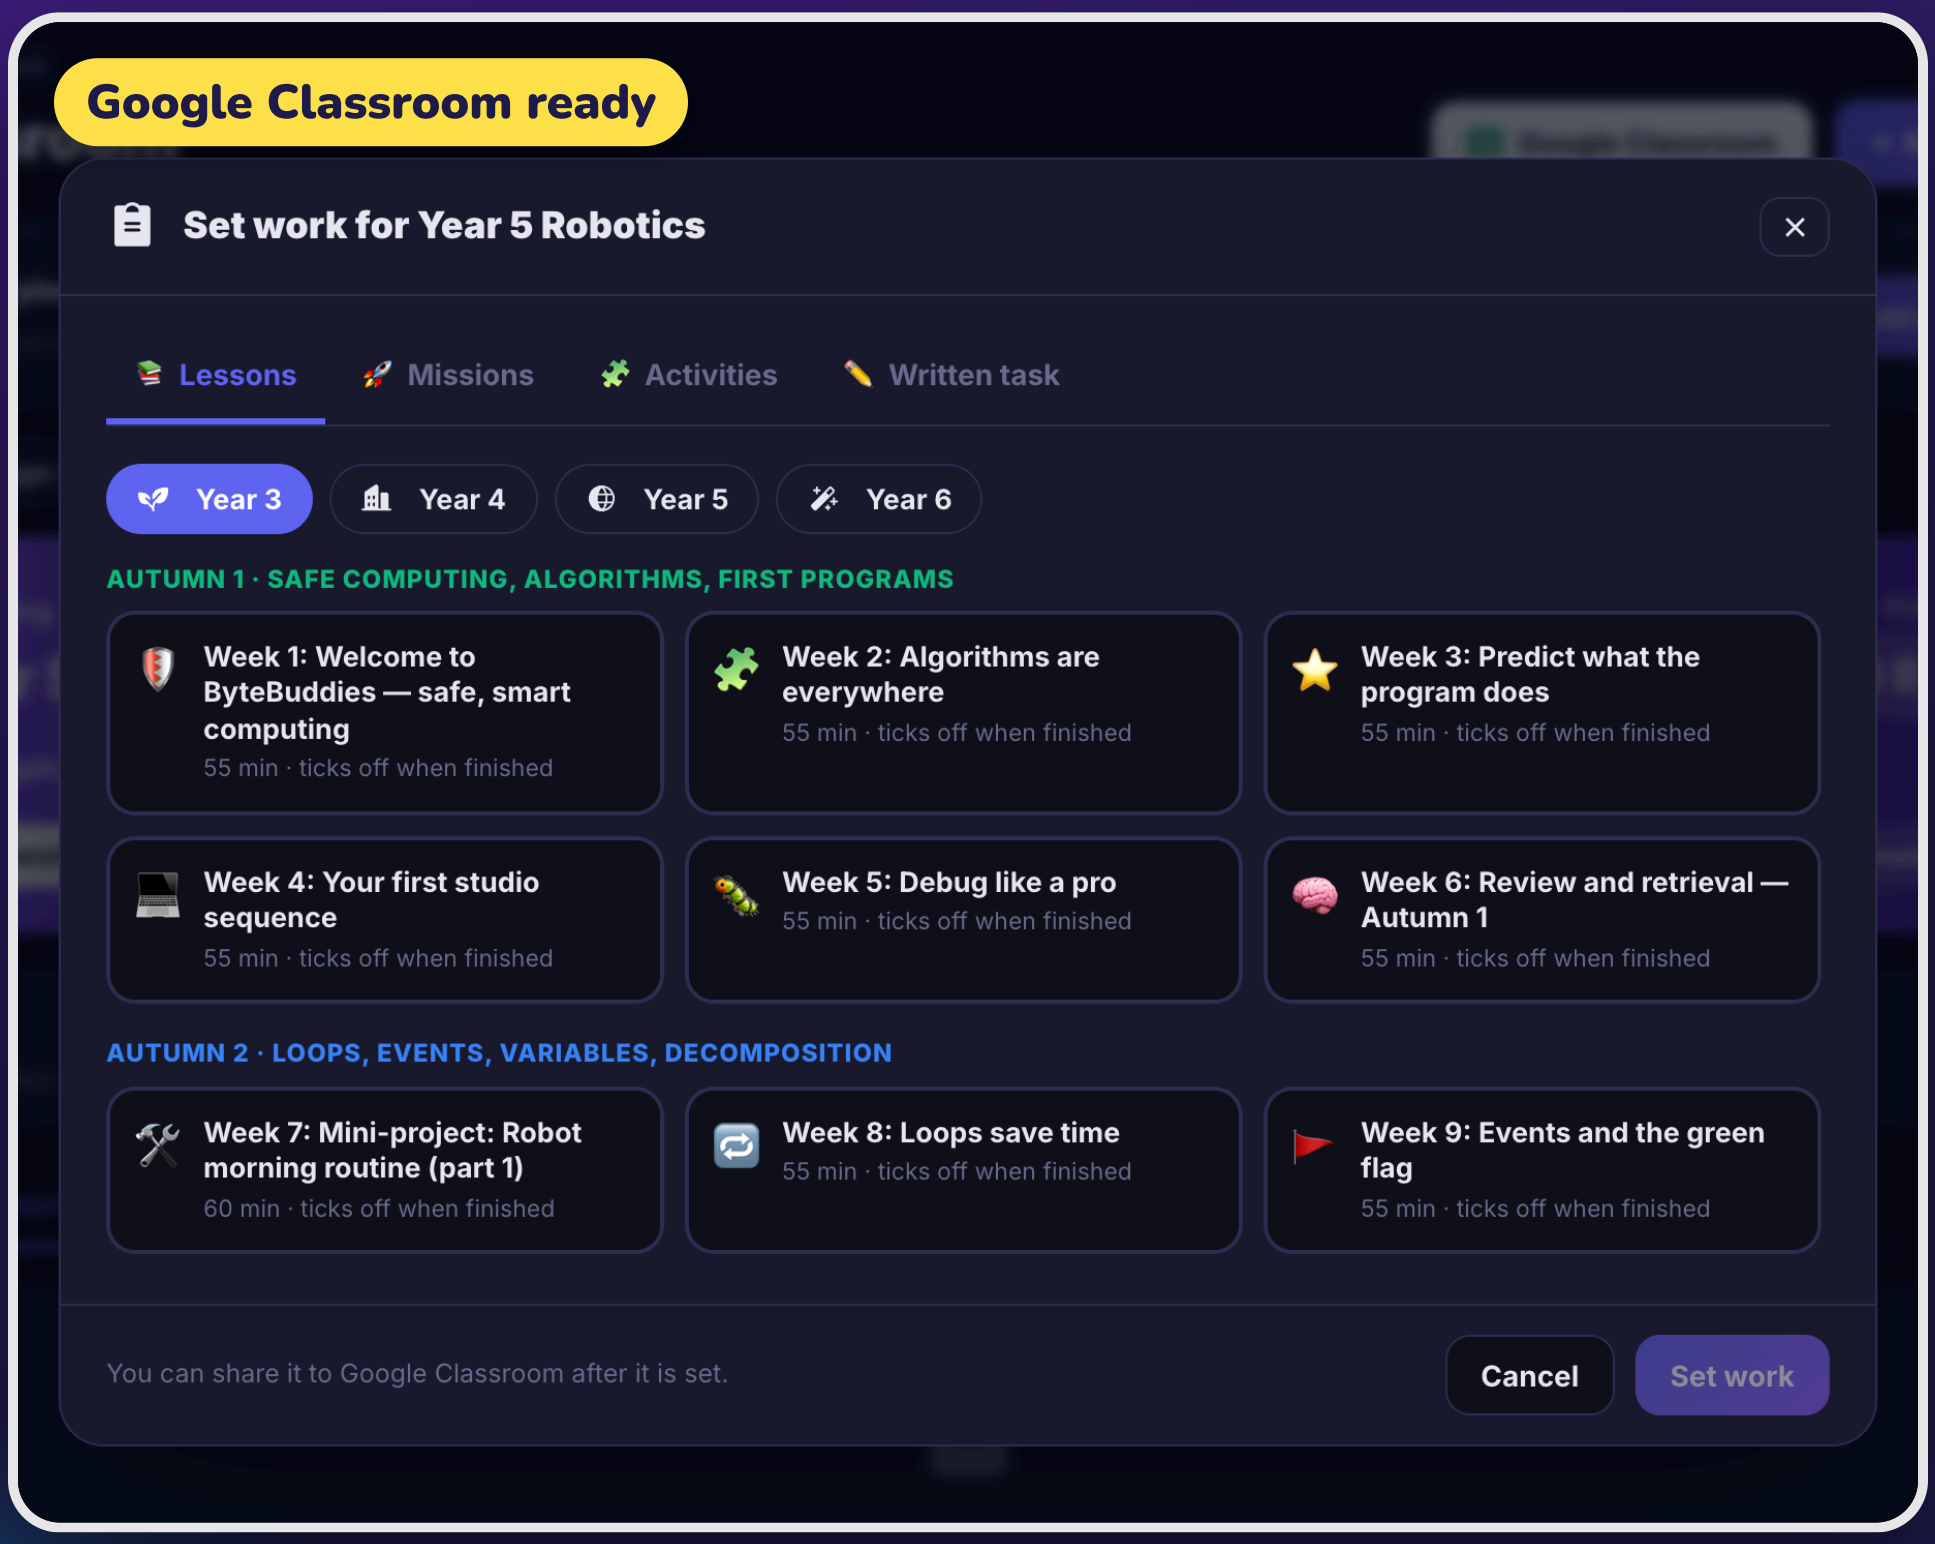

FOR TEACHERS

A full year of lessons, set in two clicks

Weekly lessons for Years 3 to 6, plus missions and activities. Share them straight to Google Classroom.

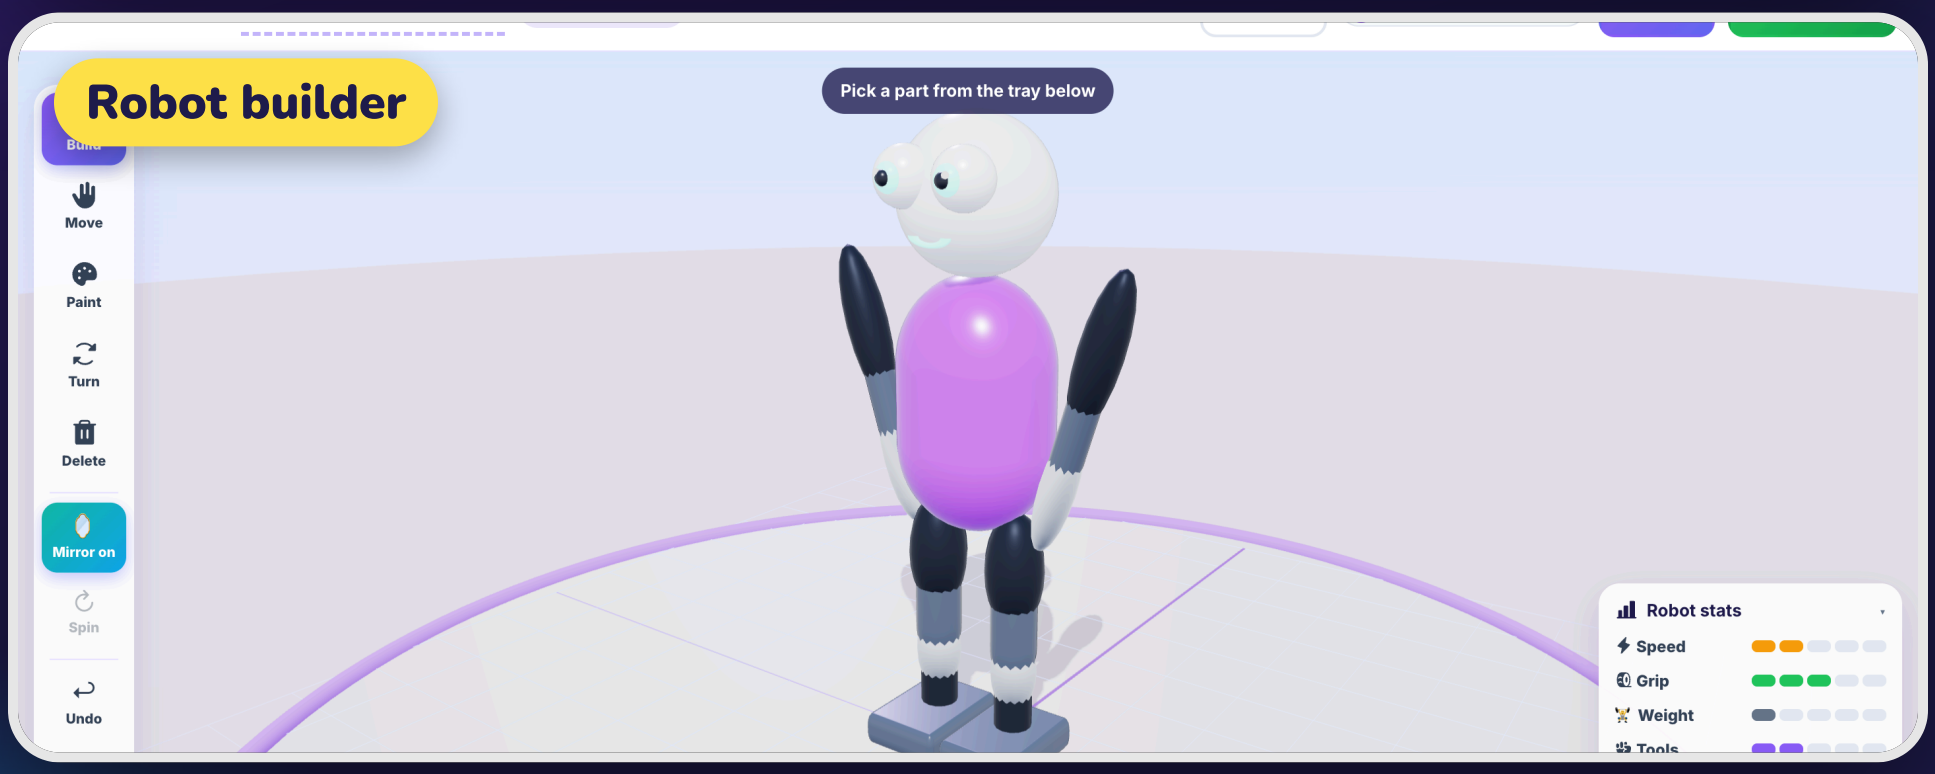

PUPILS BECOME CREATORS

They design the games too

Build robots piece by piece, design race tracks, place obstacles, then code their way round them.

MADE FOR CLASSROOMS

Exciting, and classroom-safe

Foam swords, bamboo sticks and friendly characters. Nothing to install: it runs in the browser.

SEE IT IN ACTION

Computing your pupils ask to do.

- 🎯 Clear objectives in every activity
- 🧱 Blocks → 🐍 Python
- 📚 Ready-made lessons, Years 3–6
- 🏫 Google Classroom ready
- 🎨 Pupils build their own games
